Asbestos Re-Inspection

Social Security Administration
Metro West Building
300 N. Greene Street
Baltimore, Maryland 21202

Survey: October 23, 2003 through November 21, 2004

GSA Bldg. No.: MD00068ZZ

Prepared by:
Reginald E. Jarvis Jr.

Social Security Administration
Office of Facilities Management
Office of Environmental Health
and Occupational Safety

A. EXECUTIVE SUMMARY

On October 23, 2003 through November 21, 2003, Judy Younce, Joe DiVinceczo, and Jerome Adamson, accredited asbestos inspectors representing the SSA Office of Environmental Health and Occupational Safety, conducted an asbestos re-inspection at the Social Security Administration Metro West Building (General Services Administration Building Number MD00068ZZ) located at 300 N. Greene Street, Baltimore, Maryland 21202.

The asbestos re-inspection was conducted selected days over four weeks during non-working hours. The re-inspection included the visual examination of all Social Security Administration occupied space, bulk sampling and analysis of suspect asbestos-containing material identified at the facility. The previous re-inspection results could not be located for this building.

Seventeen (17) suspect materials were identified that included:18" x 18" white raised floor tile, 1" x 1" ceramic tile, 12" x 12" white with variegated brown specks, mastic under 12"x 12" gray floor tile, white drywall, joint compound, drywall paper, black floor tile mastic, carpet glue, 2'x 4' white ceiling tile with medium holes, sheetrock ceiling tile, cove mastic, sealant red and brown, trowel/plaster ceiling, 2'x 2' ceiling tile, 12" x 12" ceiling tile, rug glue, and carpet adhesive. One-hundred-fifty-five (155) samples of the suspect asbestos-containing building materials were collected during the asbestos inspection. Three (3) of one-hundred-fifty-five (155) samples were multi-layered. The multi-layered samples were not split in the laboratory as indicated to be analyzed as individual samples. All multi-layered samples were analyzed as whole samples. AMA Sample Numbers and Social Security Administration's Sample Numbers are used to identify the sample results on the Certificate of Analysis Sheet.

Black floor tile mastic and ceramic tile grout were identified as asbestos containing material (3% Chrysotile). Black floor tile mastic Social Security Administration identification numbers are: A017B, HQMWTA005B, A020B, A033B, A034B, A046B, A052B, A056B, A060B, A061B, A062B, A079B, HQMWTA081B, HQMWTA076B, HQMWSBA093B, and HQMWNBA105B. The ceramic tile grout is identified by Social Security Administration identification number HQMWNBA105B.

The existence of the asbestos-containing materials in the Metro West Building does indicate the need for an Operations and Maintenance Program. The Operations and Maintenance Program should include the type, location, condition, and risk assessment of the asbestos-containing materials. Further, the program should include a provision for the office to be re-inspected every 3 years to assess the condition of the asbestos containing materials, determine if any of it has been removed, identify any areas that were renovated and revealed asbestos-containing material, and to determine if all appropriate records have been maintained. Only persons who have appropriate training in control and work practices and personal protective equipment regarding asbestos-containing materials should perform any such repair or replacement activities.

ASBESTOS-CONTAINING MATERIALS

Room Number(s)/Location(s)	SSA Sample Numbers	Material Description	Analytical Result	Estimated Quantity	Risk Assessment Code (RAC) and Condition of Asbestos Containing Material	Response
Inside 13th floor conveyor belt room.	A017B	Black Mastic.	3% Chrysotile.	90 sq. ft.	RAC 4 – Good Condition and Non-friable. Potential for Exposure Low	Operations and Maintenance Program.
Outside janitor's closet, room 1316.	HQMW TA005B	Black Mastic	3% Chrysotile	80 sq. ft	RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.
Stairwell # 4, 13th floor.	A020B	Black Mastic	3% Chrysotile	110 sq. ft.	RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.
12th floor conveyor belt room.	A033B	Black Mastic	3% Chrysotile	90 sq. ft.	RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.
12th floor Stairwell # 4 by fire damper.	A034B	Black Mastic	3% Chrysotile	70 sq. ft	RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.
11th floor, stairwell # 5.	A046B	Black Mastic	3% Chrysotile	140 sq. ft.	RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.
11th floor, stairwell #4.	A052B	Black Mastic	3% Chrysotile	180 sq. ft.	RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.
11th floor, room 1111.	A056B	Black Mastic	3% Chrysotile	60 sq. ft.	RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.
10th floor, G-7, inside conveyor belt room.	A060B	Black Mastic	3% Chrysotile	90 sq. ft.	RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.
10th floor, in front of conveyor belt room.	A061B	Black Mastic	3% Chrysotile		RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.
10th floor, inside stairwell # 4.	A062B	Black Mastic	3% Chrysotile	180 sq. ft.	RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.
9th floor, between 9-F-7 - 9-G-8	A079B	Black Mastic	3% Chrysotile		RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.

B. INTRODUCTION

On October 23, 2003 through November 21, 2003, Judy Younce, Joe DiVinceczo, and Jerome Adamson,, accredited asbestos inspectors representing the SSA Office of Environmental Health and Occupational Safety, conducted an asbestos re-inspection at the Social Security Administration Metro West Building (General Services Administration Building Number MD00068ZZ) located at 300 N. Greene Street, Baltimore, Maryland 21202. This is a delegated facility maintained by the Social Security Administration. Social Security Administration employees do enter the mechanical rooms and spaces. The survey included inspection of the interior of the building and mechanical spaces, as well as bulk sampling of materials that potentially contained asbestos. All accessible space in the Social Security Administration's Metro West Building was included in this survey. Prior to the survey, the floor plans, architectural, construction, HVAC, electrical and plumbing blueprints were reviewed as well as previous asbestos inspection reports.

The Social Security Administration's Metro West Building is approximately 1,491,085 square feet. Construction of the building was completed in the late 1970's. The roof is flat and comprised of built-up felt and asphalt. The exterior walls are brick. The interior walls are drywall in the office spaces. It has an underground parking garage. The floors are concrete. The majority of the office floors are finished with carpeting, the aisle ways and stairwells are finished with vinyl floor tile. Ceilings are grid lay-in. Lighting is recessed, mounted fluorescent. The facility's heating ventilation and air conditioning system (HVAC) uses hot water and chilled water provided through a piping system to various mechanical rooms. The building uses desiccant systems for dehumidification of the north and south buildings during the cooling season. Conditioned air is supplied through the system via sheet metal and flexible ductwork to fan coil units located above the ceiling in the occupied space. The sheet metal ducts have mastic on the seams. Air is supplied through the ceiling to the occupied spaces via an airbar system that is constructed of fiberglass and in some cases sheet metal. Return air is drawn through return air grills located in the lights and grids in the ceiling into the return air plenum above the drop ceiling. The Social Security Administration's Metro West Building employs approximately 4,000 people. The main entrance of the building faces east. The Metro West Building is composed of offices/rooms, including: manager's office, main floor, assistant manager's office, ADP room, telephone equipment room, storage room, staff restroom, multi-purpose room, video conference room, area director space and restrooms.

Seventeen (17) suspect materials were identified that included:18" x 18" white raised floor tile, 1" x 1" ceramic tile, 12" x 12" white with variegated brown specks, mastic under 12"x 12" gray floor tile, white drywall, joint compound, drywall paper, black floor tile mastic, carpet glue, 2'x 4' white ceiling tile with medium holes, sheetrock ceiling tile, cove mastic, sealant red and brown, trowel/plaster ceiling, 2'x 2' ceiling tile, 12" x 12" ceiling tile, rug glue, and carpet adhesive.

C. METHODS

The survey of the facility was performed according to the Social Security Administration's protocol and 40 CFR Part 763 Asbestos. Additionally, the survey complied with all federal standards and regulations, including those of the Occupational Safety and Health Administration, as well as industry standards for care.

Common materials were grouped building-wide and sampled using a building-wide random sampling plan. All sampling was conducted after working hours. Bulk sample collection was minimally destructive and samples were collected from inconspicuous areas. The suspect material was thoroughly wetted and all layers of the suspect material were penetrated when taking samples. Samples were placed in sealed containers or bags. After sealing the container, the container surface was wet-wiped. All samples were assigned an identifier per

the Social Security Administration protocol. Sampling tools were wet-wiped and dried between the collections of each sample. The sample site was then encapsulated with non-asbestos containing spackle compound.

One-hundred-fifty-five (155) samples of the suspected asbestos-containing building materials were collected and sent for analysis. One-hundred-thirty-three (133) bulk samples were processed. One hundred thirteen (113) Homogenous Materials were analyzed using the progressive method using Polarized Light Microscopy (PLM). "Progressive method" means that analysis is discontinued if one sample in each set of homogenous samples was found to contain asbestos; otherwise, all samples in the set were analyzed. Twenty-two (22) samples were analyzed using Transmission Electron Microscopy (TEM) by Aerosol Monitoring Analysis Analytical Services, Incorporate, 4475 Forbes Boulevard, Lanham, Maryland 20706. Six (6) samples were not analyzed because they were multi-layered samples, AMA did not split the samples as noted on the Chain of Custody sheet. Fourteen (14) samples were not analyzes because the "Progressive method" was used for homogenous materials.

Three (3) of the bulk samples were multi-layered. The individual layers of the multi-layered samples were not split at the laboratory in order to separate and individually analyze the component layers. The multiple layers were analyzed under AMA Sample Numbers that analyzed one hundred percent of the sample, splitting the multiple layers was determined not necessary to perform additional sampling. All samples were assigned unique sample numbers by the laboratory. One-hundred-thirteen (113) bulk samples were analyzed for asbestos using polarized light microscopy and twenty-two (22) bulk samples were analyzed by Transmission Electron Microscopy at the AMA Analytical Services Laboratory, Incorporate in Lanham, Maryland. This laboratory is accredited by the National Voluntary Accreditation Program. Materials were considered to contain asbestos if the sample showed a concentration of asbestos greater than one percent using polarized light microscopy.

Descriptions and locations in Table I list all materials that contained greater than 1% asbestos. Table II lists samples that do not contain asbestos or samples that contain less than 1% asbestos. Colors of the building materials differ from AMA's because AMA analyzes the samples under a microscope that will make the color of the sample different from the inspector's perception of colors.

Bulk samples were not collected from fiberglass insulation on the HVAC ductwork where it was determined that the material was fiberglass, and did not contain asbestos per 40 CFR Part 763.86. Ceramic tiles on walls or floors were also considered to be less than one percent (<1%) asbestos; however, the ceramic tile mastic, from which samples could not be collected, was assumed to contain asbestos. Finally, no outdoor samples were collected.

D. RESULTS

Seventeen suspect materials were identified that included: floor tile mastic, carpet glue adhesive, ceiling tile sheetrock, cove base mastic, sealant, raised floor tile, ceramic floor tile, ceiling tile 2' x 4', floor tile, ceiling tile plaster ceiling troweled, drywall paper, drywall joint compound, ceiling tile 2' x 2', ceiling tile 1' x 1', and plaster ceiling tiles. Asbestos was not detected in any of the building materials listed in this paragraph during the asbestos inspection.

The ceramic floor and wall tiles covering the mastic were in good condition and should be monitored during the Operations and Maintenance program.

Table I summarizes the condition and location of the asbestos-containing materials identified in the building. Table II presents the results and locations of the samples collected in which asbestos was not detected or less than 1% asbestos.

E. DISCUSSION AND RECOMMENDATIONS

The existence of the asbestos-containing materials in the Metro West Building does indicate the need for an Operations and Maintenance Program. The Operations and Maintenance Program should include the type, location, condition, and risk assessment of the asbestos containing materials. Further, the Program should include a provision for the office to be re-inspected every 3 years to assess the condition of the asbestos-containing materials, determine if it has been removed, identify any areas that were renovated and revealed asbestos-containing material, and to determine if all appropriate records have been maintained. Only persons who have appropriate training in control and work practices and personal protective equipment regarding asbestos-containing materials should perform any such repair or replacement activities. Finally, it is important to note that all asbestos-containing materials may not have been identified due to inaccessibility or their association with another building material.

F. SUPPORTING DOCUMENTS

The following supporting documents are attached to the report:

Certificate of Analysis (PLM) – 12 pages

Certificate of Analysis (TEM) – 3 pages

Chain of Custody – 12 pages

Floor Plans - 18 pages

TABLE I – SUMMARY OF ASBESTOS-CONTAINING MATERIALS

Room Number(s)/area(s)	SSA Sample Numbers	Material Description	Analytical Result	Estimated Quantity	Risk Assessment Code (RAC) and Condition of Asbestos Containing Material	Response
Inside 13th floor conveyor belt room.	A017B	Black Mastic.	3% Chrysotile.	80 sq. ft.	RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.

TABLE II – SUMMARY OF ASSUMED ASBESTOS CONTAINING MATERIALS

Room Number(s)/area(s)	SSA Sample Numbers	Material Description	Analytical Result	Estimated Quantity	Risk Assessment Code (RAC) and Condition of Asbestos Containing Material	Response
Outside janitor's closet, room 1316.	HQMWT A005B	Black Mastic	3% Chrysotile.	80 sq. ft.	RAC 4 – Good Condition and Non-friable. Potential for Exposure Low.	Operations and Maintenance Program.

This report applies only to the sample, or samples, investigated and is not necessarily indicative of the quality or condition of apparently identical or similar products. As a mutual protection to clients, the public and these Laboratories, this report is submitted and accepted for the exclusive use of the client to whom it is addressed and upon the condition that it is not to be used, in whole or in part, in any advertising or publicity matter without prior written authorization from us. Sample types, locations and collection protocols are based upon the information provided by the persons submitting them and, unless collected by personnel of these Laboratories, we expressly disclaim any knowledge and liability for the accuracy and completeness of this information. Residual sample material will be discarded in accordance with the appropriate regulatory guidelines, unless otherwise requested by the client. NVLAP Accreditation applies only to polarized light microscopy of bulk samples and transmission electron microscopy of AHERA air samples.

This report applies only to the sample, or samples, investigated and is not necessarily indicative of the quality or condition of apparently identical or similar products. As a mutual protection to clients, the public and these Laboratories, this report is submitted and accepted for the exclusive use of the client to whom it is addressed and upon the condition that it is not to be used, in whole or in part, in any advertising or publicity matter without prior written authorization from us. Sample types, locations and collection protocols are based upon the information provided by the persons submitting them and, unless collected by personnel of these Laboratories, we expressly disclaim any knowledge and liability for the accuracy and completeness of this information. Residual sample material will be discarded in accordance with the appropriate regulatory guidelines, unless otherwise requested by the client. NVLAP Accreditation applies only to polarized light microscopy of bulk samples and transmission electron microscopy of AHERA air samples. **All rights reserved. AMA Analytical Services, Inc.**

Summary of Polarized Light Microscopy

AMA Sample Number	Client Sample #	Total Asbestos	Chrysotile Percent	Amosite Percent	Crocidolite Percent	Other Asbestos Percent	Mineral Wool Percent	Fiberglass Percent	Organic Percent	Synthetic Percent	Other Percent	Particulate Percent	Sample Color	Analyst ID	Comments

The following footnotes only apply to those samples which the total asbestos result is flagged with a note number.

1 TEM RECOMMENDATION - Please note, due to resolution limitations with optical microscopy and/or interference from matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos. It is recommended that the additional analytical technique of TEM be used to check for asbestos fibers below the resolution limits of optical microscopy.

2 MATRIX REDUCTION RECOMMENDATION - Please note, due to interference from the matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos which is obscured from view. It is recommended that the additional preparation technique of gravimetric reduction be performed on this sample to minimize the obscuring effects of matrix components, followed by reanalysis by PLM and/or TEM.

Analysis Method - EPA/600/R-93/116 dated July 1993

NAD = "No Asbestos Detected" TR = "Trace equals less than 1% of this component"

Luis Bustillos
